

You can set up a graph to help you see the results

Give your graph a title

Axis Title

Instructions:

1. Label your x and y axis with two different data values that you measured or observed.
2. Label your x- axis with units and numbers that fit over your data high and low values.
3. Label your y- axis with units and numbers that fit over your data high and low values.
4. Do your experiment and record your results

Axis Title
