

Planet Balloon Origami

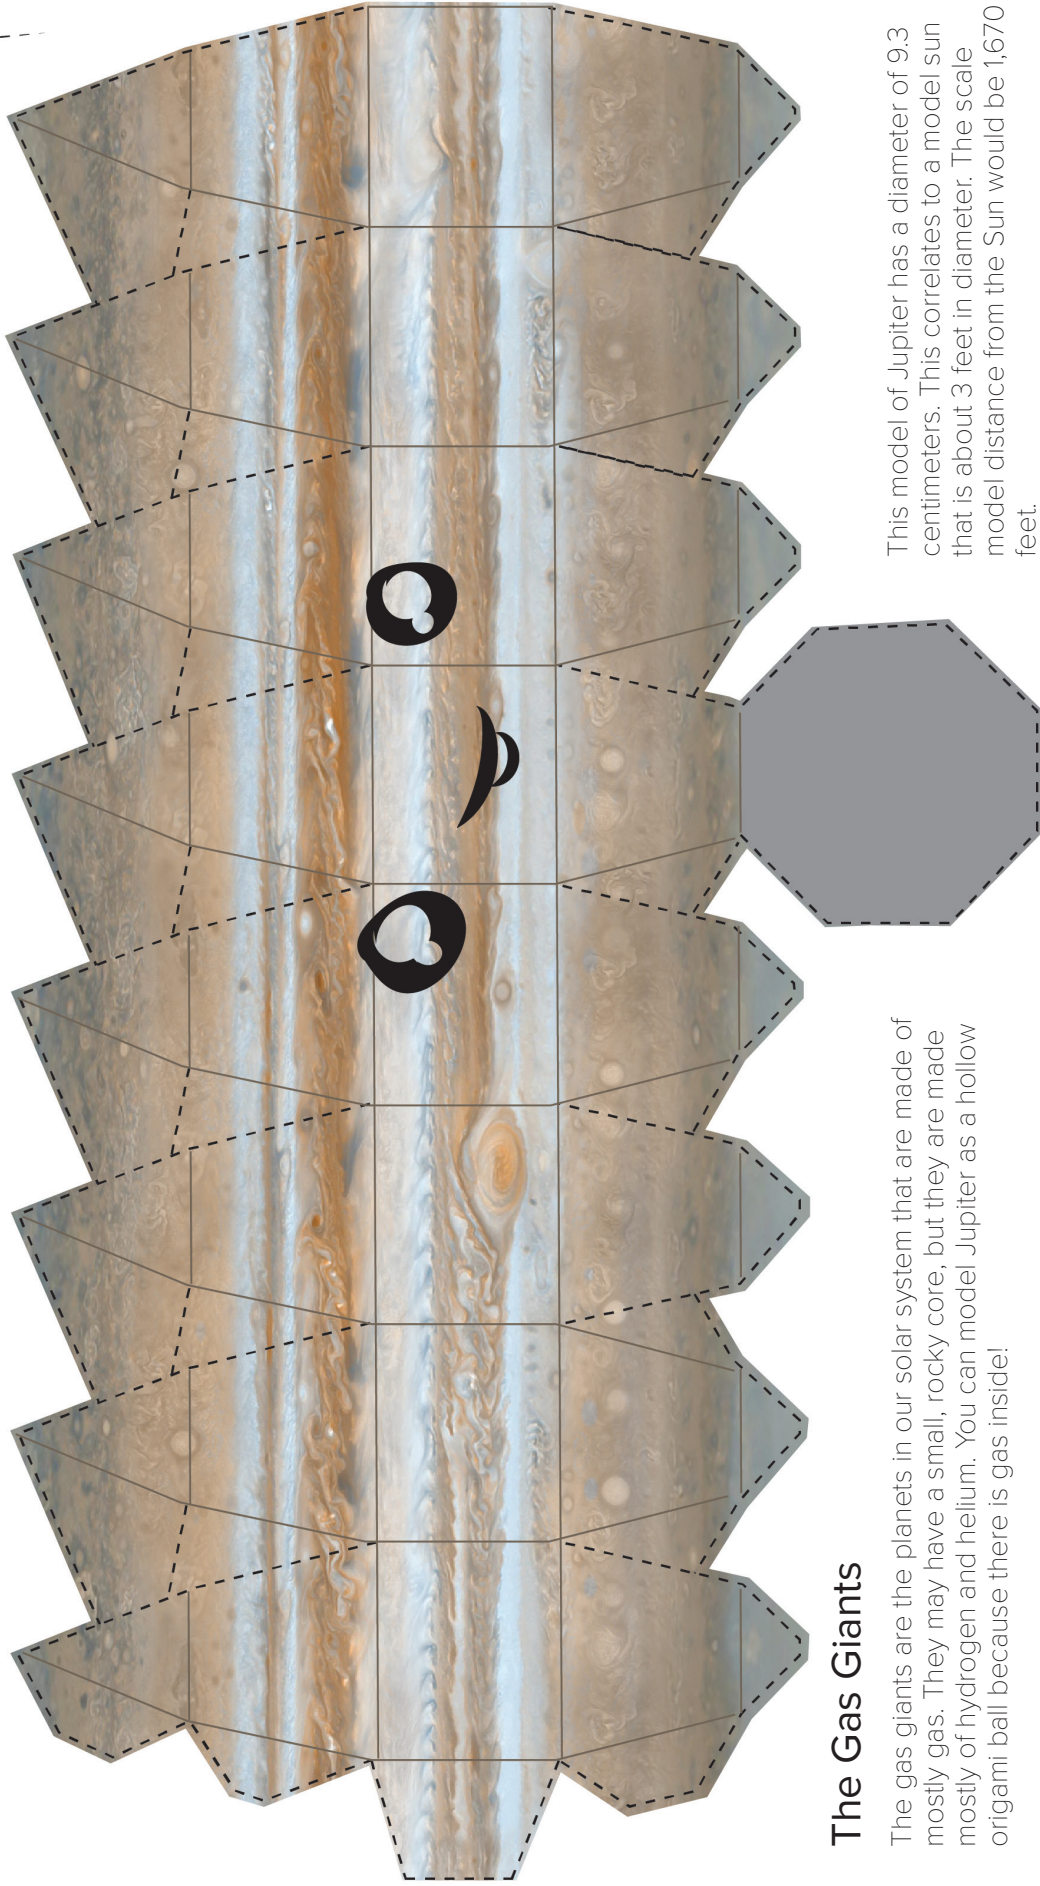

STEMTaught[®]

Jupiter

Planet Facts:

- Diameter: 86,881 miles
- Distance from Sun: 483.8 million miles
- Length of day: 9 hours, 51 minutes
- Orbital period: 12 years
- Gravity: 2.5 times Earth's gravity

The Gas Giants

The gas giants are the planets in our solar system that are made of mostly gas. They may have a small, rocky core, but they are made mostly of hydrogen and helium. You can model Jupiter as a hollow origami ball because there is gas inside!

This model of Jupiter has a diameter of 9.3 centimeters. This correlates to a model sun that is about 3 feet in diameter. The scale model distance from the Sun would be 1,670 feet.
