Preparing for the Eggs

Fluffing the Nest

Wildlife Observation Notes

Preparing to raise eagle chicks is an important job, and raising the chicks will be a lot of work. Eagle work in pairs as mother and father to raise their young. Watch these Eagle parents as they cooperate to build a nest and prepare for egg laying.

Here are some questions to answer through observation:

1. Where do eagles prefer to sleep when they are not tending eggs or chicks?

2. What do eagles do when they wake up in the morning

3. How are the eagle nests constructed? (Materials, building techniques, organization)

Wildlife Observation Journal Entry:

Write a journal entry about what you observed as you watched these eagles morning routine. Be sure to highlight what behaviours this nesting pair of eagles exhibit that are beneficial for the survival of their young and the survival of their species?
